

Help - Mobile Use

Be sure to try using this website on your smart phone.

Horizontal viewing on a smart phone has the look and feel of the regular computer screen. This is at least true for the iPhone 8, a pretty large phone. The **vertical view** of the website on the phone presents the website with a different look and feel. The images and text boxes will resize to the phone and be presented one after the other vertically.

Menu Logo seen on the smart phone when viewed vertically.

The menu logo at upper left:

The phone's menu takes some getting used to; find the desired page by selecting this three bar menu to see the pages listed, and then scrolling to the page and selecting it.

Note that the administrative view is very small and barely legible. The administrator may expand the window with two fingers to enlarge the text (slightly better viewing in horizontal position).
